

Thanks for using uArm Creator Studio (UCS)!

Here are basic steps to get started:

1. Upgrade firmware for your uArm

Double-click (Mac)  flash_firmware

(Win)  flash_firmware

2. Double-click to start playing with UCS.

Don't forget to **WIN A GIFT** by answering a 5-minute survey (access via the menu bar in UCS) **before 25 Nov. 2016.**

Settings Help **Win A Gift!**

(Please familiarise with UCS before answering the survey, so we can know how you feel about this software :))

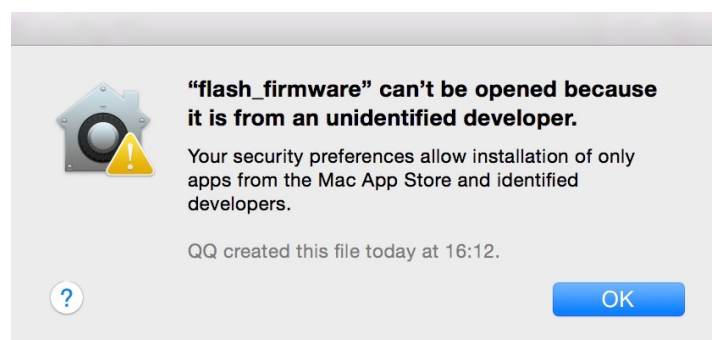

You will have a chance to **win a uArm accessory (Gripper/Pen Holder/Bluetooth Module)!**

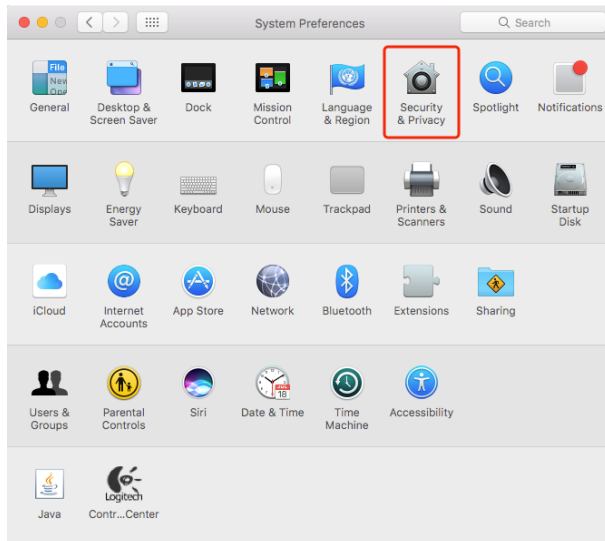

UCS is completely open source.

IMPORTANT for Mac users:

if you encounter this issue, please follow the following steps to change your Mac's security option.

Open System Preferences and click **Security & Privacy**

Click **Anywhere**, now you should be allowed to open the firmware file.

If you can't find "Anywhere" as an option, it's very likely that your MacOS has upgraded to MacOS Sierra (which has a much stricter gatekeeping strategy).
Please finish the next step.

If you are using **macOS Sierra**, you need to input this command in terminal (search "terminal" in spotlight search).

You need to input your Mac password.

sudo spctl --master-disable
